

Publication requirements in the SzEEDS^M Doctoral Program

The Management of the SzEEDS^M Doctoral Program has identified the requirements such that they should be in harmony with the conditions of the publication environment in a realistic way. For each PhD candidate the following parameters apply.

1. The most important papers of a candidate should be published in English in an internationally ranked journal. Minimum two journal papers are mandatory of which
 - a) one paper is to be published in a Q1-Q4 journal as a mandatory item,
 - b) another paper is to be published in a Q1-Q4 journal as a preferred optional item,
OR
 - c) another paper is to be published in a journal of the category A or B in the list of journals determined by any section of Department IX of the Hungarian Academy of Sciences (MTA) as an alternative optional item.

At least one of these journal publications should be co-authored with the candidate's supervisor(s).

2. As a complement to section 1 above, students can present a proof of two papers being at least in the first round of “under review/revise and resubmit” stage.
3. At least two conference paper versions are to be published in conference proceedings which have a Web-of-Science/Scopus categorization as mandatory items.
All conference participations must be agreed with the Management of the Doctoral Program in advance.
4. As a substitute for a conference paper, an ISBN registered book chapter or a Scopus registered, published Journal paper can be optionally accepted.
5. Beyond the accomplishment of the required publication items, students may also publish in different types of publication forums.
6. All appeared publications should be entered into the MTMT (Repository of Scientific Works) by the students.
